SUMMARY

Mobile systems researcher studying privacy and accountability in LLM/VLM-enabled apps. I characterize how model-derived private attributes propagate through real app workflows and design attribute-, workflow-, and channel-level protections. Earlier work spans AI scaffolding for parent–child storytelling and cross-spatial interaction.

EDUCATION

M.S./Ph.D. in Artificial Intelligence — **Sept 2024 – Present**
Seoul National University — Seoul, South Korea

B.S. in Mathematics Education & Artificial Intelligence — **Mar 2018 – Feb 2024**
Seoul National University — Seoul, South Korea

RESEARCH EXPERIENCE

Graduate Researcher — **Sept 2024 – Present**
Human-Centered Computer Systems Lab, Seoul National University — Seoul, South Korea

- Conduct research on mobile AI privacy and accountable mobile systems, focusing on how LLM/VLM-enabled apps infer and expose private attributes in real app workflows.
- Characterize how model-derived attributes travel through UI, storage, network, voice, and cross-app channels, and develop attribute-, workflow-, and channel-level privacy protections.

TEACHING EXPERIENCE

Head Teaching Assistant, Software Development Principles and Practices — **Sept 2026 – Dec 2026**
Seoul National University — Seoul, South Korea

Teaching Assistant, Software Development Principles and Practices — **Sept 2025 – Dec 2025**
Seoul National University — Seoul, South Korea

- Supported programming assignments, code reviews, and team-based software projects.

Teaching Assistant, Education and Artificial Intelligence — **Mar 2023 – Jun 2023**
Seoul National University — Seoul, South Korea

- Mentored project teams designing AI-driven educational applications and provided feedback on technical implementation and pedagogical grounding.
